

Practice program: Number Names

Johanna, a 5-year-old girl, is learning the number names. She is having difficulty remembering all of the words. To give her extra practice, her mother assigns a number and instructs her to write the number names separated by white space. Help her mum by writing a Java program that prints the number names of the numbers so Johanna may check the answers herself.

Assume that she is learning from zero to nine.

Note:

- Number should not start with zero
- In the Sample Input / Output provided, the highlighted text in bold corresponds to the input given by the user and the rest of the text represents the output.
- Adhere to the code template, if provided.
- Please don't use `System.exit(0)` to terminate the program.

Sample Input 1

Enter the number

58723

Sample Output 1

five eight seven two three

Sample Input 2

Enter the number

614

Sample Output 2

six one four

Sample Input 3

Enter the number

20

Sample Output 3

two zero
